

To whom It May Concern, As a subscriber to XM radio and as a Long Haul Truck driver I utilize the news and weather stations provided in order to avoid traffic/ weather related delays along my route. If these services were not available I would have to revert to trying to locate a local radio station that might or might not be giving the local weather and traffic information. Local radio is very unreliable and difficult to recieve in enough time to avoid storms and accidents which may block my route.

I find it very irritating to have the NAB attempt to dictate what I am permitted to listen to and believe they should stop thier Totalitarianist activities.

I strongly urge you to reject NAB' petition 04-160 and allow us to move to a higher level of communication.

Thank You
